

Have a go at the Skittles Challenge.

I had an amazing time on Science Day. Working with lots of different classes was lots of fun. With me, children had a go at the skittles experiment. If you would like to have a go at home here is what you need to do:

1. First, set up your skittles in a circle on a saucer/flat plate.
2. Then, pour water in the bowl, not too much, just so the bottom half of the skittles is dipped in water.
3. After that, watch what happens and enjoy the patterns forming in the water.

Could you change the order of how you have set up the skittles?
What would happen if you place them closer together or further apart?

Make sure you take photos and come and share them with me.
I can't wait to see what you come up with!

Have fun.
Mrs Phadey
