

Write $<$, $>$ or $=$ to compare the volumes of the shapes.

Here are some shapes made from cubes.

Put the shapes in ascending order of volume.

Now, find some items around your house which you might be able to estimate the volume of. You might choose something like a book, a game box or some food packaging.

Estimate the dimensions of the box in cm and see if you can make an estimate for the volume of the item.

This activity has lots of possible answers based on what you choose. When you have calculated 3 or 4, you could ask an adult if they agree with you.
