

Topic Week 5

Science

Monday's session

A little fun investigation

Any fruit or vegetable tops you want try (eg, carrots, parsnips, pineapple) - cut off the tops when they are being prepared for dinner, put the tops onto a saucer or bowl of shallow water, leave them on the side and see what grows.

Draw a careful picture of how they look at the beginning, observe them over to coming weeks and update you pictures.

If any go mouldy, throw them away.

Tuesday's session -we've set a short assessment, but with a difference!

You are allowed to look up the answers to make sure you understand 😊

ICT

LO: to make a quiz to test your teachers/parents.

An example quiz has been set up to play in Game Show mode - you can split your family into two teams.

You need to think of some questions that you know the answer to but your parents/teachers might struggle with.

Write the questions and put them into one quiz set up as a game show.

You will then need to use 2Calculate to make a scoreboard.

Topic - Geography

Stop the press! David Attenborough and his nature programme film crew are on their way - a new species of animal has just been found.

Is it a vertebrate or an invertebrate?

How are vertebrates classified further?

Think about an animal for your island. Think about some facts - animal group they belong to, their diet, their habitat etc.

Task - create a fact file for a new species that has been discovered on your island.
